

YASHKUMAR JAIN

AI ENGINEER INTERN | MACHINE LEARNING INTERN

Los Angeles, CA | +1 (213) 849-1214 | yashkumar1.jain@gmail.com | [linkedin.com/in/yashkumarjain1](https://www.linkedin.com/in/yashkumarjain1) | github.com/YashkumarJain

EDUCATION

University of Southern California (USC) - M.S. Computer Science, GPA: 3.66/4.00

Los Angeles, CA | Dec 2027

Current Coursework: Deep Learning and Its Applications, Agentic AI

Additional Coursework: Foundations of Artificial Intelligence, Machine Learning for Data Science, Analysis of Algorithms

VESIT - B.E. Computer Engineering, GPA: 9.54/10

Mumbai, India | May 2022

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, HTML/CSS

ML/AI: Scikit-learn, TensorFlow, OpenCV, Pandas, NumPy, Matplotlib; regression, classification, clustering, PCA, neural networks, computer vision, model evaluation, prompt engineering

Frameworks/Databases: Django, React.js, Node.js, MySQL, MongoDB, Git

EXPERIENCE

University of Southern California - Student Assistant, Space Management

Los Angeles, CA | Jul 2026-Present

- Audited space assignments across **15-20+ departments** in Archibus, identifying outdated or inaccurate records in **60-70%** of reviewed departments and correcting data used for institutional planning.
- Conducted on-site verification of faculty and departmental occupancy, reconciling floor plans with current assignments to improve the reliability of campus space-utilization data.

Ernst & Young (EY) - Technology Risk Consultant

Mumbai, India | Jul 2022-Aug 2025

- Executed end-to-end computer system validation for SAP S/4HANA, LabWare LIMS, BMS, EMS, and HMIS across five pharmaceutical clients under FDA 21 CFR Part 11, GxP, and EU Annex 11 requirements.
- Authored and executed **50+ SAP and 30+ LabWare test scripts**, resolved discrepancies with developers, and produced URS/FRS, risk assessments, RTMs, and validation reports supporting zero-finding regulatory audits.
- Designed and deployed a Power Apps, SharePoint, Power Automate, and Power BI document-routing application adopted across global EY teams, replacing manual project segregation and reducing document-misrouting risk.

LeadingIndia.ai - Deep Learning Intern (Team Developer)

Remote | May-Jun 2020

- Evaluated MLP, Gradient Boosting, AdaBoost, Bagging, and Random Forest models on GWA workflow data, achieving **92.85% classification accuracy** when categorizing virtual-machine resource-demand patterns.
- Prepared CPU, memory, and network-throughput features and compared five algorithms to select a model for predictive provisioning and more efficient cloud resource allocation.

Knowledge Solutions India - Machine Learning Intern (Team Developer)

Remote | May-Jun 2020

- Developed and compared regression models for insurance-cost prediction using Scikit-learn, performing categorical encoding, scaling, outlier analysis, PCA, and feature-importance visualization.
- Trained Linear Regression and Random Forest variants on age, sex, BMI, smoking status, and demographic features, documenting comparative performance with and without dimensionality reduction.

AI & SOFTWARE PROJECTS

Real-Time Face Mask Detection & Social Distance Monitoring

[GitHub](#) | [Demo](#) | [JETIR Publication](#)

- Contributed to a team-built real-time computer vision pipeline combining MobileNetV2, TensorFlow, OpenCV, SSD, and YOLOv3 for mask classification, person detection, and proximity monitoring.
- Processed live video streams to identify mask compliance and flag unsafe interpersonal distances; documented the system as a co-author of a seven-page JETIR publication.

MyDietDiary - Personalized Food Recommendation System

[GitHub](#) | [Demo](#) | [IRJET Publication](#)

- Co-developed a full-stack recommendation application using K-Means and Random Forest on 120 food items, with Django, React.js, and Node.js supporting biometric-based meal planning and calorie tracking.
- Clustered foods by calories and classified breakfast, lunch, and dinner options to generate recommendations based on BMI, activity level, health goals, and daily calorie needs.

DocMind - Multi-Agent AI Research Platform (Capstone, Requirements Phase)

Aug 2026-Present

- Defining requirements and architecture for a planned end-to-end research platform spanning Python, LLMs, RAG, DynamoDB, machine learning, a Node.js frontend, REST APIs, and AWS deployment; target completion Feb 2027.
- Researching competing AI research products and iterating on user needs, feature scope, and system workflows through structured evaluation with multiple large language models.

VOLUNTEER EXPERIENCE

SoLA Con Robotics - Volunteer Trainee Instructor

Los Angeles, CA | Feb-Mar 2026

- Taught AI fundamentals and block-based programming to middle school students, guiding them in building and programming an autonomous car robot.

Aerial Drone Competition - Volunteer Referee

Los Angeles, CA | Feb-Mar 2026

- Evaluated manual flight performance and autonomous pre-programmed path accuracy, scoring task completion and flight stability for student teams.

PUBLICATIONS & CERTIFICATIONS

Publications: Co-author, Real-Time Face Mask Detection and Social Distance Monitoring (JETIR, 2021); MyDietDiary: Diet Recommendation System (IRJET, 2023).

Certifications: EY AI Engineering Bronze - Generative AI and Prompt Engineering (2025); Udemy ChatGPT & Generative AI Complete Guide (2025); Microsoft Introduction to Programming Using Python (2021). **Work Authorization:** Eligible for F-1 CPT for Summer 2027.
